### **Sercel Extends Capability of 508<sup>XT</sup> Seismic Acquisition System to Transition Zones**

Sercel announced today the launch of a transition zone version of its state-of-the-art 508<sup>XT</sup> seismic acquisition system. Seismic crews will now be able to deploy the 508<sup>XT</sup> solution in marsh zones and water depths of up to 25 m.

Designed with reinforced hardware to withstand the complex challenges of operating in shallow water environments, the new 508<sup>XT</sup> transition zone system also benefits from Sercel's unique fault-tolerant X-Tech<sup>®</sup> cross-technology architecture, featuring local storage and automatic rerouting to maximize survey productivity. With its 100% real-time monitoring capability, it also brings users peace of mind that operations are running smoothly.

Pascal Rouiller, Sercel CEO, said: "By adapting our 508<sup>XT</sup> technology for transition zone environments, Sercel has made another step forward in our strategy to meet customer needs for a single seismic acquisition system that can operate in any terrain and any configuration. The 508<sup>XT</sup> is undoubtedly the most efficient and powerful seismic acquisition technology available today that can offer crews the guarantee of recording the highest-quality seismic data, regardless of terrain conditions."

### **About Sercel**

Sercel is the world's leading designer and manufacturer of innovative seismic equipment and reservoir monitoring instruments. Sercel provides oil field service companies and geophysical contractors with the widest range of leading-edge technologies for exploration in land, marine, ocean bottom, transition zone and reservoir environments. Employing more than 1,500 people worldwide, Sercel's main sales offices are located in Houston (USA) and Nantes (France). More information about Sercel is available at [www.sercel.com](http://www.sercel.com).
