

Nantes, France – February 11<sup>th</sup>, 2021

### **Sercel strengthens position of its 508<sup>XT</sup> land seismic acquisition system in India**

Sercel has significantly increased the market position of its 508<sup>XT</sup> land seismic acquisition system in India. The system is currently being deployed by over 30 crews, representing a total of over 110,000 508<sup>XT</sup> channels countrywide and making it clearly the system of choice in India.

Based on Sercel's cutting-edge and unique cross-technology (X-Tech<sup>®</sup>) architecture, the 508<sup>XT</sup> land seismic acquisition system enables automatic data re-routing and local storage for seamless and uninterrupted operations. The highly flexible and robust system adapts to the toughest terrain and weather conditions and meets all 2D/3D land seismic project requirements.

Ashutosh Kumar, CEO, Asian Energy, said: "By choosing Sercel's 508<sup>XT</sup>, we have ensured we are using the best technology to meet our final customers' expectations. We have been using the 508<sup>XT</sup> since 2018 and more recently strengthened our relationship with repeat orders for a large contract. After careful evaluation, we have found the 508<sup>XT</sup> to be the best system available, in terms of its robustness, fault-free operations and lower operational cost comparatively, coupled with good technical support, which certainly adds to its advantages."

Emmanuelle Dubu, Sercel CEO, said: "Sercel's success in establishing such a strong presence in India is a result of the long-term relationships we have developed with all our customers that enable us to better understand their specific needs. Ultimately, of course, it is the winning combination of the 508<sup>XT</sup>'s reliability, robustness and flexibility for efficient and productive seismic acquisition that has proven its value to Indian contractors."

#### **About Sercel**

Sercel designs and manufactures high-tech solutions for subsurface exploration. Capitalizing on its world-leading position in the seismic acquisition industry, Sercel also provides innovative solutions for structural monitoring, defense and underwater acoustics applications. Headquartered in Nantes (France), Sercel operates worldwide and employs more than 1,500 people. More information about Sercel is available at [www.sercel.com](http://www.sercel.com).
