### **Sercel completes delivery of largest UNITE system to date**

Sercel announced today the completed delivery and field deployment of a 39,000-channel UNITE cable-free land seismic acquisition system. The customer is a major international geophysical contractor and the system is being deployed on a large high-production Vibroseis survey in the north of Mexico. The project calls for 3D-3C acquisition and the system is configured with Sercel's latest RAUeX-3 field units.

The customer chose the UNITE system for this project not only because it will provide the high levels of production expected from today's cable-free seismic acquisition technology but also because it will meet their client's requirements for daily QC of the whole spread and rapid delivery of SEG-D data to the field processors. Given the high levels of production required and the large volume of data being shot on this project, UNITE remains unique in that it is the only acquisition system available on the market that allows all data to be harvested and delivered for field processing, without the need for transcription, within 24 to 48 hours of acquisition.

Pascal Rouiller, CEO, Sercel, said: "We are delighted that our UNITE system has been selected for this very important project. UNITE, in combination with our VE464 vibrator control system, will guarantee the highest levels of production while giving our customer complete confidence in the integrity of the data being shot. Such deliverables are what our 40-plus UNITE customers worldwide have come to expect from the very best cable-less acquisition system available today."

### **About Sercel**

Sercel is the world's leading designer and manufacturer of innovative seismic equipment and reservoir monitoring instruments. Sercel provides oil field service companies and geophysical contractors the widest range of leading-edge technologies for exploration in land, marine, ocean bottom, transition zone and reservoir environments. Employing 2500 people worldwide, main Sercel sales offices are located in Houston (USA) and Nantes (France). More information about Sercel is available at [www.sercel.com](http://www.sercel.com).
