

Steermate

4D SOURCE STEERING SOLUTION

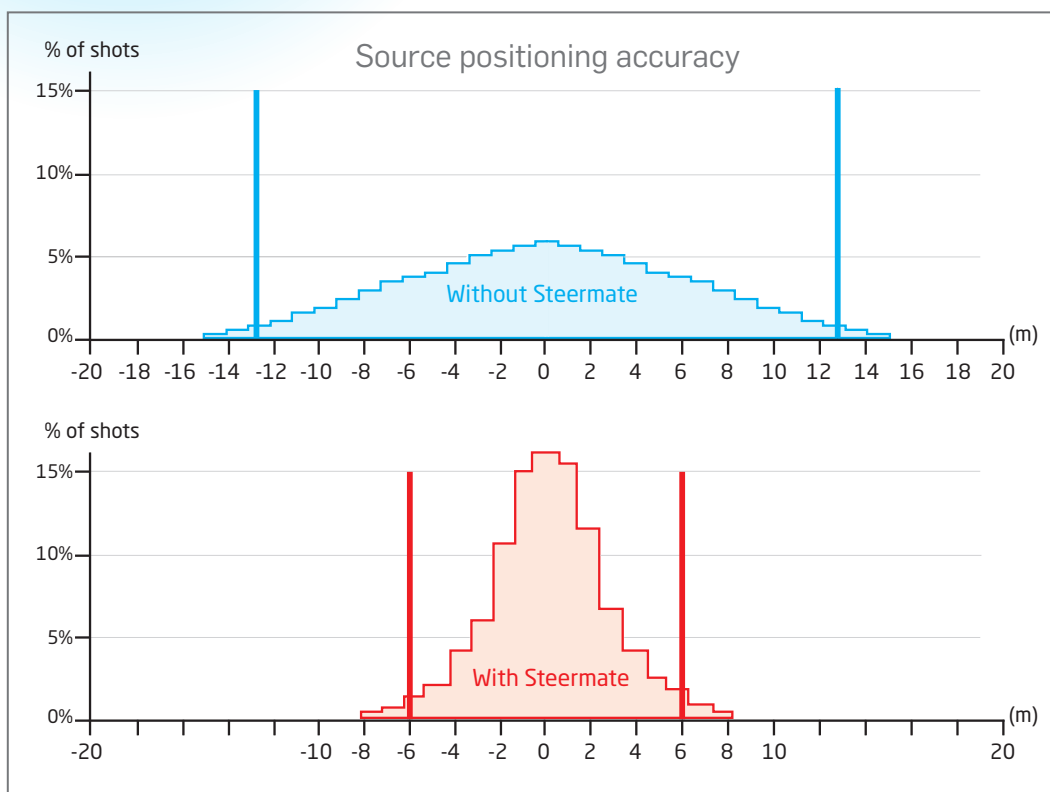

Steermate

4D Source steering solution

Steermate is a simple and efficient solution to ensure accurate source positioning at pre-plot locations. Powerful, plug and play and adaptable to any flexible seismic source array, the system has been designed to cope with harsh sea states and strong currents. When used during line changes Steermate allows for a significantly reduced vessel turn radius and delivers a corresponding improvement in survey productivity. With manual or automatic control, the lateral steering capability guarantees the best repeatability for 4D surveys.

- ADAPTABLE TO ANY FLEXIBLE SOURCE ARRAY
- PERFORMS EVEN IN HARSH CONDITIONS
- REDUCED TURN TIMES
